-I- FUNCTION: DEGRADES SHORT-LIVED REGULATORY AND ABNORMAL PROTEINS IN PRESENCE OF ATP. HYDROLYZES TWO ATPS FOR EACH PEPTIDE BOND CLEAVED IN THE PROTEIN SUBSTRATE (BY SIMILARITY).

-I- CATALYTIC ACTIVITY: HYDROLYSES Of large proteins such as globin, casein and denaturated serium albumin, in presence of ATP.

-I- SUBDINIT: HOMOTERRAMER (BY SIMILARITY).

-I- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

-I- SIMILARITY: BELONGS TO PEPTIDASE FAMILY SI6; ALSO KNOWN AS THE LON FAMILY OF ATP-DEPENDENT PROTEASES.

J. Biol. Chem. 271:33414-33424(1996).
-!-FUNCTION: HYDROLYSES CHITIN OLIGOSACCHARIDES; (GLCNAC)4 TO (GLCNAC)2 AND (GLCNAC)5.6 TO (GLCNAC)2 AND (GLCNAC)3. INACTIVE TOWARDS CHITIN, GLUCOSAMINE OLIGOSACCHARIDES, GLYCOPROTEINS AND GLYCOPEPTIDES CONTAINING (GLCNAC)2. HAS OPTIWUM ACTIVITY AT PH 6.5-7.0 AND AT TEMPERATURE OF 35-37 DEGREES CELSIUS.
-!- CAPALYTIC ACTIVITY: Hydrolysis of the 1,4-beta-linkages of N-acetyl-D-glucosamine polymers of chitin.
-!- EXZYME REGULATION: INHIBITED BY (GLCNAC)4, (GLCNAC)5, (GLCNAC)6,

The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous.

The length in codons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. Gene prediction is based on positional base preference in codons using a specially developed Hidden Markow Model (Kroph et al., Nuclet Acids Research, 22(22):4768-4778(1994) and the FramePlot program of Bibb et al., Gene 30:157-66(1984) as implemented at http://www.nih.go.jp/

Int(291-bin)/frameplot.pl. CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation codon gity, ttg or (att)) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the most upstream initiation codon.

IMPORTANT: This sequence MAY NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlap between neighbouring submissions.

Cosmid Q11 Cosmid Q11 lies between H24 and D78 on the Asel-Q genomic restriction fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /close="confidential or complement(1. 289)

gamma-synthase//yese, len: 392 as; previously sequenced as SW:CYSA_STRCO (EMBL:U37580), cysA, S.coellcolor putative cystathionine gamma-lyase (392 as). Similar to many e.g. SW:EMECL_PSEPU (EMBL:088554), mdeA, Pseudomonas putida methionine gamma-lyase (398 as), fasta scores; opt: 608 ascores: 653.6 E(): 4.5e-99; 36.9% identity in 404 as overlap. Highly similar to TR:03568 (EMBL:X9193) Streptomyces antibioticus hypothetical protein found as overlap). Contains Pfam match to PF01053 cys_Met_Meta_PP, Cys/Met_metabolism PLP-dependent enzyme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /traislation="MOLALLRTFVTVHRAGSFTRAAALLGLSQPAVTSQIRTLERQLG

The moore significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous.

The length in codons is given for each CDS.

The length in codons is given for each CDS.

The length in codons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codons using a specially developed Hidden Markow Model (Krogh et al., Nucleic Acids Research, 22(22):4768-4778(1994)) and the FremmePlot program of Bibb et al., Gene 30:157-66(1984) as implemented at http://www.nih.go.jp/
iun/cgi-bin/frammeplot.pl. CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation

                                                                                                                     IMPORTANT: This sequence MAY NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlap between neighbouring submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   >328 aa;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /note="previously sequenced region SW:SCAPTRELA EMBL:X87267 S.coelicolor apt & relA genes" complement(1229. .3772)

```
correct initiation codon. Where possible we choose an initiation codon (att) ttp or (att)) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream initiation codon. If this cannot be the entire insert of the sequence MAY NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlap between neighbouring submissions.

Cosmid E19A lies between and overlaps cosmids E6 and E56 on the AseI-E genomic restriction fragment.
                                                                                                                                          are also included but some of these may be fortuitous.
The length in codons is given for each CDS.
Substantially the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous.

The length in codons is given for each CDS.

The length in codons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon.

Gene prediction is based on positional base preference in codons using a specially developed Hidden Markov Model (Kroph et al., Nucleic Acids Research, 22(22):478-4778(1994) and the FramePlot program of Bibb et al., Gene 30:157-66(1984) as implemented at http://www.nin.go.jp/

in/Cgi-bin/frameplot.pl. CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation codon gig, ttg or (att)) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the most thoman initiation codon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  'note="nominal overlap with Streptomyces coelicolor cosmid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              IMPORTANT: This sequence MAY NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlap between neighbouring submissions.
                                                                                                                                                                                                             3 (bases 1 to 32704)

```
codon (atg, gtg, ttg or (att)) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream initiation codon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Submitted (07-APR-1999) Streptomyces coelicolor sequencing project, Sanger Centre, Wellcome Trust Genome Campus, Hinxton, Cambridge CB10 1SA E-mail: barrell@sanger.ac.uk Cosmids supplied by Prof. David A.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous. The length in codons is given for each CDS.

The length in codons is given for each CDS.

The length in codons is given for each CDS.

CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. Gene prediction is based on positional base preference in codons using a specially developed Hidden Markov Model (Krogh et al., Nucleic Acids Research, 22(22):4768-4778(1994)) and the FramePlot program of Bibb et al., Gene 30:157-66(1984) as implemented at
oxidoreductase; racemase; regulator; thiolase; transferase.
Streptomyces coelicolor A3(2).
Streptomyces coelicolor A3(2).
Bacteria; Firmicutes; Actinobacteria; Actinobacteridae;
Actinomycetales; Streptomycineae; Streptomycescales; Streptomycineae; Streptomycescales; Streptomycescales; Streptomycineae; Streptomycescales; Kinashi, M. Kleser, H.M., Denapaite, D., Eichner, A., Cullum, J., Kinashi, H. and Hopwood, D.A.
Ast of ordered cosmids and a detailed genetic and physical map for the 8 Mb Streptomyces coelicolor A3(2) chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Streptomyces coelicolor sequencing at The Sanger Centre is funded by the BBSRC and Beowulf Genomics
Details of S. coelicolor sequencing at the Sanger Centre are available on the World Wide Web.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (URL; http://www.sanger.ac.uk/Projects/S_coelicolor/)
CDS are numbered using the following system eg SC7B7.01c. SC (S. coelicolor), 7B7 (cosmid name), .01 (first CDS), c (complementary

TR:054381 (EMBL:X79146) from the lincomycin-production gene cluster of Streptomyces lincolnensis 78-11 (578 as) fasts ascores; opt: 1624, 2-score: 1696.3, E(): 0, (50.3% identity in 541 as overlap). Contains two Pfam matches to entry PF00005 ABC_tran, ABC_transporter, two Prosite matches to PS00017 AFP/GFP-binding site motif A (P-loop) and Prosite match to PS00211 ABC transporters family signature. Also contains a possible coiled-coil region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /note="Pfam match to entry PF00005 ABC_tran, ABC transporter, score 122.30, E-value 9e-33" complement(3743. .3766) /gene="SC5F2A.03c" /note="PS00017" rapporter pS00017" rapporter pS000

                                                                                                                           The present sequence is a DNA (ATCC 3004) encoding S. albus G SsgA protein. SsgA reduces branching and fragment septation and enhances fragmentation of mycelium in liquid culture resulting in lower viscosity of culture broths. Filamentous bacteria can be transformed with ssgA gene-containing plasmid to enhance the production of secondary metabolites such as, antibiotics, antitumour agents, immunosuppressive agents, hypocholesterolaemic agents, entitumour sents. antimigraine agents, hebbicides, antibarasiic agents, runinant growth promoters, bioinsecticides, receptor agonists and antagonists and biomass.
                                                                                                                                                                                                                                                                                                                                                        tgggtcttcgggcgtgaactgctggtcgagggagtcctggacgccgcgggcgacggcgac 180

```
The present sequence is a DNA (ATCC 21386) encoding S. goldeniensis SsgA protein. SsgA reduces branching and fragment septation and enhances fragmentation of mycelium in liquid culture resulting in lower viscosity of culture broths. Filamentous bacteria can be transformed with ssgA gene-containing plasmid to enhance the production of secondary metabolites such as, antiblotics, antitumour agents, immunosuppressive agents, hypocholesterolaemic agents, erryme inhibitors, antimigraine agents, herbicides, antiparasitic agents, runninant growth promoters, bioinsecticides, receptor agonists and antagonists and blomass.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180

SsgA reduces branching and fragment septation and enhances fragmentation of mycellum in liquid culture resulting in lower viscosity of culture broths. Filamentous bacteria can be transformed with ssgA gene-containing plasmid to enhance the production of secondary metabolites such as, antibiotics, antitumour agents, immunosuppressive agents, hypocholesterolaemic agents, enzyme inhibitors, antimigraine agents, herbicides, antiparasitic agents, ruminant growth promoters, bioinsecticides, receptor agonists and antagonists and biomass.
                                                                                                                                                                                                                                                                                                                                         mycelium; antibiotic, antitumour agent; immunosuppressive agent; hypocholesteroleamic agent; enzyme inhibitor; antimigraine agent; herbicide; antiparasitic agent; ruminant growth promoter; ATCC 23345; bioinsecticide; receptor agents; antagonist; biomass; ds.

The present sequence is a DNA (ATCC 23345) encoding S. griseus SsgA protein. SsgA reduces branching and fragment septation and enhances fragmentation of mycelium in liquid culture resulting in lower viscosity of culture broths. Filamentous bacteria can be transformed with ssgA gene-containing plasmid to enhance the production of secondary metabolites such as, antibiotics, antitumour agents, immunosuppressive agents, hypocholesterolaemic agents, enzyme inhibitors, antimigraine agents, herbicides, antiparaslite agents, ruminant growth promoters, bioinsecticides, receptor agonists and antagonists and biomass.
                                                                                                                                                                                                                                                                                                                                                                                                                                                   mycelium; antibiotic, antitumour agent; immunosuppressive agent; hypocholesteroleamic agent; enzyme inhibitor; antimigraine agent; herbicide; antiparasitic agent; ruminant growth promoter; ATCC 23345; bioinsecticide; receptor agent; antagonist; blomass; ds.
